

Wise Learning/Living community

Wise — Women in Science & Engineering

Women in Science & Engineering (WiSE) is a unique residential experience that helps first-year females in mathematics, science and engineering engage in their studies inside and outside of the classroom.

Current WiSE participants describe the benefits of the learning community as:

WELCOMING WiSE allows you to quickly find a large community of women who are studying in the same field as you, forming bonds early in your Clarkson career.

INSPIRATIONAL WiSE helps you connect with successful women alumnae in your major, who are great resources and will provide you with an “inside look” at many of the top companies hiring you in your field of study.

SOCIAL Because you live in the same residence hall as other WiSE first-year students, WiSE makes the transition to college life easier. You can join other WiSE members at activities like ice cream socials and community service projects.

EDUCATIONAL Along with your classmates’ support, there are WiSE mentors, upper-class female students. They are there to support you and encourage you, as well as answer any questions you will have, from getting along with your roommate, to how to switch classes, to where the best places are to eat.

Members of WiSE participate in a variety of educational events too, such as exam and homework study sessions, special guest speaker appearances, and career workshops.
